The Index Precision Strategy

Predetermined upside performance potential with a level of protection from smaller index losses.

The Index Precision Strategy may be a good choice if you are looking for a level of protection for your principal, while maintaining the opportunity for predetermined upside potential. See how it works with four possible outcomes:

If the annual index return is zero or positive, which means the value of the index remained the same or increased, you’ll receive an annual performance credit equal to the Trigger Rate. This gives you the potential for growth opportunities.

Trigger Rates may be different from what is represented in the examples. You may not be able to participate fully in a market recovery due to the Trigger Rates limit on upside potential in subsequent terms.

If the annual index return is negative, you may receive an annual negative performance credit – but only when the loss is greater than the 10% buffer. This helps provide a level of protection.

The buffer is helpful for smaller losses, but does not fully protect against more significant index declines. You could experience a loss during a term if the index declines more than the downside protection of the 10% buffer.

Possible Outcome 1:
If the annual index return is zero or positive, which means the value of the index remained the same or increased, the entire Trigger Rate would be applied.

Possible Outcome 2:
If the annual index return is positive and exceeds the Trigger Rate, the Trigger Rate would be applied.

Possible Outcome 3:
If the annual index return is negative, but within the 10% buffer, the performance credit would be zero. The buffer absorbs the first 10% of negative index return in a given term.

Possible Outcome 4:
If the annual index return is negative and exceeds the 10% buffer, there would be a negative performance credit equal to the amount of negative returns in excess of the buffer.

Available indexes:
- S&P 500® Index
- Russell 2000® Index
- Nasdaq-100® Index
- iShares® MSCI Emerging Markets ETF
- EURO STOXX 50®

This material must be preceded or accompanied by the appropriate consumer brochure, product profile, and a current prospectus for the Allianz registered index-linked annuity. Refer to the product brochure for important information and index disclosures.

INFP-009-Precision (R-5/2023) Please also see reverse side for additional important information and disclosure.
Important things to know:

- Trigger Rates can be different between newly issued contracts and inforce contracts, and they can be different between inforce contracts issued on different days and in different years.
- Trigger Rates can also be different for each index option.
- Trigger Rates are subject to change annually on the Term Start Date, and will never be less than the minimum Trigger Rates.
- 10% buffers for the currently available Index Precision Index Options cannot change.
- Amounts deducted for applicable fees and charges may result in a loss of principal or previously earned performance credits, and will not receive a performance credit on the next Term End Date.

FOR INFORMATION ON THE TRIGGER RATES currently offered on the registered index-linked annuity product, please consult your financial professional or visit www.allianzlife.com/RILAratesNF
