

ALLIANZ REGISTERED INDEX-LINKED ANNUITIES

The Index Precision Strategy

Predetermined upside performance potential with a level of protection from smaller index losses.

The Index **Precision** Strategy may be a good choice if you are looking for a level of protection for your principal, while maintaining the opportunity for predetermined upside potential. **See how it works with four possible outcomes:**

Available indexes

- S&P 500® Index
- Russell 2000® Index
- Nasdaq-100® Index
- iShares® MSCI Emerging Markets ETF
- EURO STOXX 50®

If the annual index return is zero or positive, which means the value of the index remained

the same or increased, you'll receive an annual performance credit equal to the **Trigger Rate.** This gives you the potential for growth opportunities.

Trigger Rates may be different from what is represented in the examples. You may not be able to participate fully in a market recovery due to the capped upside potential in subsequent terms.

If the annual index return is negative, you may receive an annual negative performance credit – but only when the loss is greater than the **10% buffer**. This helps provide a level of protection.

The buffer is helpful for smaller losses, but does not fully protect against more significant index declines. You could experience a loss during a term if the index declines more than the downside protection of the 10% buffer.
