The Index Performance Strategy 1-Year Term

Potential for higher performance with a level of protection from smaller index losses.

The Index Performance Strategy may be a good choice if you are looking for a level of protection for your principal, while maintaining the potential for growth opportunities. See how it works with four possible outcomes:

If the annual index return is positive, you’ll receive an annual performance credit equal to that return, up to a limit called the cap. This gives you the potential for growth opportunities.

If the annual index return is negative, you may receive an annual negative performance credit – but only when the loss is greater than the 10% buffer. This helps provide a level of protection.

Current caps may be different from what is represented in the examples. You may not be able to participate fully in a market recovery due to the capped upside potential in subsequent terms.

For certain products this can be uncapped. If the index option is uncapped you will receive the annual index return if positive.

POSSIBLE OUTCOME 1:
If the annual index return is positive, but less than the declared cap, the annual performance credit would be equal to the index return.

POSSIBLE OUTCOME 2:
If the annual index return exceeds the declared cap, a performance credit equal to the cap would be applied.

POSSIBLE OUTCOME 3:
If the annual index return is negative, but within the 10% buffer, the performance credit would be zero. The buffer absorbs the first 10% of negative index return in a given term.

POSSIBLE OUTCOME 4:
If the annual index return is negative and exceeds the 10% buffer, there would be a negative performance credit equal to the amount of negative returns in excess of the buffer.

This material must be preceded or accompanied by the appropriate consumer brochure, product profile, and a current prospectus for the Allianz registered index-linked annuity. Refer to the product brochure for important information and index disclosures.
Important things to know:

- Caps can be different between newly issued contracts and inforce contracts, and they can be different between inforce contracts issued on different days and in different years.
- Caps can also be different for each index option.
- Caps are subject to change annually on the Term Start Date, and will never be less than the minimum cap.
- 10% buffers for the currently available Index Performance Strategy 1-Year Term Index Options cannot change.
- Amounts deducted for applicable fees and charges may result in a loss of principal or previously earned performance credits, and will not receive a performance credit on the next Term End Date.
- Amounts invested in the index strategy must be held for the full term before they can receive a Performance Credit. A Daily Adjustment is applied if, before the Term End Date, you take a full or partial withdrawal, annuitize the Contract, execute a Performance Lock, a death benefit is paid, or Contract fees and expenses are deducted. The Daily Adjustment may cause you to lose principal and previous earnings even if Index performance is positive on that day or has been positive since the Term Start Date.
