

ALLIANZ LIFE ACCUMULATOR™ INDEXED UNIVERSAL LIFE INSURANCE POLICY

It's a new era of life insurance with Allianz Life Accumulator™

Our newest innovation in the IUL marketplace offers:

Powerful accumulation potential

- A variety of indexes – including the **non-volatility-controlled S&P 500® Futures Index ER; the Blended Futures Index;** and two volatility-controlled options – the Bloomberg US Dynamic Balance III ER Index and the PIMCO Tactical Balanced ER Index – in addition to a fixed rate option.
- Bonus opportunities, including a 1% flat rate bonus, a 15% multiplier bonus, and a 40% multiplier bonus with 1% asset charge.¹
- Competitive cap and participation rates to help build accumulation potential.

Allianz® innovation

- Index Lock gives clients more control to lock in an index value at any point, once per crediting period.²
- With the Auto Lock option, the policy can **activate the Index Lock automatically**, if the index value reaches an upper target and/or lower target that has been pre-set.³

Flexible design

- Loan features are designed for the potential to supplement retirement income strategies or other financial goals, while offering guaranteed loan rates.⁴
- The policy can be customized with optional riders and the ability to accelerate a portion of the death benefit in the event of a chronic or terminal illness.

All this in one product, plus the protection of an income-tax-free death benefit.⁵

¹ Bonused products may include higher surrender charges, longer surrender periods, lower caps, or other restrictions that are not included in similar products that don't offer a bonus. The index allocations that offer the interest bonus will generally have lower caps and participation rates. Not all bonuses guarantee that a policy will be credited with an interest bonus every year as some are based on the growth of an index.

² Exercising an Index Lock may result in a credit higher or lower than if the Index Lock had not been exercised. We will not provide advice or notify you regarding whether you should exercise an Index Lock or the optimal time for doing so. Index Lock is available with certain indexed allocations.

³ Setting targets authorizes Allianz to automatically activate an Index Lock once the target is reached, based on the index interest rate percentage at the end of the business day. Targets need to be renewed after each crediting period unless auto renew is active.

⁴ Policy loans and withdrawals will reduce the available cash value and death benefit and may cause the policy to lapse, or affect guarantees against lapse. Withdrawals in excess of premiums paid will be subject to ordinary income tax. Additional premium payments may be required to keep the policy in force. In the event of a lapse, outstanding policy loans in excess of unrecovered cost basis will be subject to ordinary income tax. If a policy is a modified endowment contract (MEC), policy loans and withdrawals will be taxable as ordinary income to the extent there are earnings in the policy. If any of these features are exercised prior to age 59½ on a MEC, a 10% federal additional tax may be imposed. Tax laws are subject to change and you should consult a tax professional.

⁵ The death benefit is generally income-tax-free when left to beneficiaries.

The indexes available within the policy are constructed to keep track of diverse segments of the U.S. or international markets, or specific market sectors. These indexes are benchmarks only. Indexes can have different constituents and weighting methodologies. Some indexes have multiple versions that can weight components or may track the impact of dividends differently. Although an index may affect your interest credited, you cannot buy, directly participate in or receive dividend payments from any of them through the policy.

The PIMCO Tactical Balanced ER Index is comprised of the U.S. Equity Futures Custom Index, a bond component comprised of the PIMCO Synthetic Bond ER Index and a duration overlay, and shifts weighting between them daily based on historical realized volatility of the components. The U.S. Equity Futures Custom Index provides exposure to large cap U.S. stocks in excess of a short-term interest rate. The PIMCO Synthetic Bond ER Index is comprised of a small number of derivative instruments designed to provide exposure to U.S. Investment-grade and Treasury bond markets in excess of a short-term interest rate. The Index is an excess return index, which means that it captures the returns of the underlying constituents which are in excess of a short-term interest rate. All else equal, higher short-term interest rates would result in an excess return index to underperform a non-excess return version of the same index.

The "PIMCO Tactical Balanced ER Index" (the "Index") is a rules-based index that tactically allocates across U.S. equity and fixed income markets using quantitative signals. The Index is a trademark of Pacific Investment Management Company LLC ("PIMCO") and has been licensed for use for certain purposes by Allianz Life Insurance Company of North America (the "Company" or "Allianz") with respect to this Allianz product (the "Product"). The Index is the exclusive property of PIMCO and is made and compiled without regard to the needs, including, but not limited to, the suitability or appropriateness needs, as applicable, of the Company, the Product, or any Product owners. The Product is not sold, sponsored, endorsed or promoted by PIMCO or any other party involved in, or related to, making or compiling the Index. PIMCO Tactical Balanced Excess Return Index performance contains backtested performance beginning 22 April 2004, which is prior to the actual launch of the index: The PIMCO Tactical Balanced Excess Return Index launched on 2 August 2018.

Neither PIMCO nor any other party involved in, or related to, making or compiling the Index has any obligation to continue to provide the Index to the Company with respect to the Product. In the event that the Index is no longer available to the Product or Product owners, the Company may seek to replace the Index with another suitable index, although there can be no assurance that one will be available.

The S&P 500® Futures Index ER is constructed from the front-quarter E-mini futures contract on the S&P 500. It is part of the S&P Factor Series, which measures the inherent risk premium between asset classes and financial markets.
