The indexes available within the contract are constructed to keep track of diverse segments of the U.S. or international markets, or specific market sectors. These indexes are benchmarks only. Indexes can have different constituents and weighting methodologies. Some indexes have multiple versions that can weight components or may track the impact of dividends differently. Although an index may affect interest credited, clients cannot purchase, directly participate in, or receive dividend payments from any of them through the annuity contract.

There is potential for volatility-controlled indexes to underperform compared against benchmark indexes.

The Blended Futures Index is comprised of four sub-indexes: S&P 500® Futures Index ER, Bloomberg International Equity Custom Futures ER Index, Bloomberg US 10yr Note Custom Futures ER Index, and Bloomberg US Small Cap Custom Futures ER Index.

The Index applies a bespoke volatility control mechanism to seek to identify changing market conditions using intraday data with the aim of stabilizing the overall level of risk of the Index. The volatility control calculation applied by Morgan Stanley as part of the Index’s methodology may decrease the Index’s performance and thus the return of any product linked to the Index. In addition, because the volatility control calculation is expected to reduce the overall volatility of the Index, it will also reduce the cost of hedging certain products linked to the Index.

The PIMCO Tactical Balanced ER Index is comprised of the U.S. Equity Futures Custom Index, a bond component comprised of the PIMCO Synthetic Bond ER Index and a duration overlay, and shifts weighting between them daily based on historical realized volatility of the components. The U.S. Equity Futures Custom Index provides exposure to large cap U.S. stocks in excess of a short-term interest rate. The PIMCO Synthetic Bond ER Index is comprised of a small number of derivative instruments designed to provide exposure to U.S. Investment-grade and Treasury bond markets in excess of a short-term interest rate. The Index is an excess return index, which means that it captures the returns of the underlying constituents which are in excess of a short-term interest rate. All else equal, higher short-term interest rates would result in an excess return index to underperform a non-excess return version of the same index.

The “PIMCO Tactical Balanced ER Index” (the “Index”) is a rules-based index that tactically allocates across U.S. equity and fixed income markets using quantitative signals. The Index is a trademark of Pacific Investment Management Company LLC (“PIMCO”) and has been licensed for use for certain purposes by Allianz Life Insurance Company of North America (the “Company” or “Allianz”) with respect to this Allianz product (the “Product”). Neither PIMCO nor any other party involved in, or related to, making or compiling the Index has any obligation to continue to provide the Index to the Company with respect to the Product. In the event that the Index is no longer available to the Product or Product owners, the Company may seek to replace the Index with another suitable index, although there can be no assurance that one will be available.
