3 The Weighted Average Maturity ("WAM") of a portfolio is an average of the maturities of all securities held in the portfolio, weighted by each security's percentage of net assets

4 The Weighted Average Life ("WAL") of a portfolio is the WAM, but measured without reference to any rule 2a-7 provision that otherwise permits a fund to shorten the maturity of a variable rate security by reference to its interest rate readjustment dates

5 The Maturity of a portfolio security is deemed to be the date on which, in accordance with the terms of the security, the principal amount must unconditionally be paid, taking into account any maturity date extensions that may be effected at the option of the issuer. The Effective Maturity represents the next rate reset date, or the date in which a demand feature is effective for puttable securities.

Variable investment options are available only as investment options in variable life insurance policies and variable annuity contracts issued by life insurance companies. They are not made available to the general public directly.
